No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB

::
 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence encodes the humanized mouse antibody 21.6 light chain variable region, La, directed against leukocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 VL and VH (AAQ99889 and 2C AAQ99892) regions are linked to human constant regions in the C construction of a humanized antibody against VLA-4. The 5' and 3' C ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors CC containing human kappa or gamma-1 constant regions. In the humanized Clight chain, amino acids L45 L49, L58 and L69 in the humanized CC light chain, amino acids L45 L49, L58 and L69 in the humanized CC reposition of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric CC can be used for inhibiting adhesion of a leukocyte to an endothelial CC cell and for treating inflammatory diseases such as multiple CC cerebral traumas, meningitis or encephalitis. The antibodies can corebrating anti-idiotype antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 106;

22. 21.6 and a modified human REI framework. It can be expressed in a mamplian host cells following PCR amplification and mutagenesis of appropriate fragments of mouse and human DNA sequences. The humanised 21.6 VL and a humanised 21.6 VH (see AAW22413) can be used to produce a claimed humanised 21.6 antibody that is useful in the manufacture of a medicament for treating asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephrittis, atopic dematitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha-4 integrin for use as a vaccine or an immunogen. It is also useful for generating idiotypic antibodies. The humanised antibody has a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                        This polypeptide, designated La, comprises the light chain variable region (VL) of a humanised alpha-4 integrin antibody 21.6. It is composed of complementarity determining regions (CDRs) from the VL region (see ABW22409) of mouse alpha-4 integrin monoclonal antibody of a sold a modifical human pri framework.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expressed in mammalian host cells following PCR amplification and mutagenesis of appropriate mouse and human DNA sequences. The humanised 21.6 VH (see AAW22413) can be used to produce a claimed humanised 21.6 antibody that is useful in the manufacture of a medicament for treating asthma, atherosclerosis, AIDS, dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The humanised antibody has a half-life in the human circulation essentially equivalent to that of naturally occurring human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This polypeptide, designated La, comprises the light chain variable region (VL) of a humanised alpha-4 integrin antibody 21.6 (see also AAW22412). It is composed of complementarity determining regions for the VL region (see AAW22409) of mouse alpha-4 integrin monoclonal antibody 21.6 and a modified human REI framework. It can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1997-297879/27.

Cloned cDNA CDR sequences of mouse 21.6 variable light and variable heavy regions are linked to human constant framework regions of the REI antibody for the light chain and the 2*CL antibody for the heavy chain in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the human kappa LCVR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig light chain. Plasmids encoding the chimeric antibodies are transfected into COS colling the humanized articles and the statistic of the mouse 21.6 Ig light chain. Plasmids encoding the chimeric antibodies are transfected into COS colling the humanized articles and the statistic of the mouse 21.6 Ig light chain.

                                                                                                                                                                                                                                                                                                                                                                            anti-idiotype antibodies.
                                                                                                                                                                                                                                                                                                                                                                                        cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothedial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Page 66; 105pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New humanised antibodies against VIA-4 - used for inhibiting leukocyte adhesion to endothelial cells, partic. for treating

The sequence represents the mouse antibody 21.6 light chain variable region directed against leukocyte adhesion molecule VLA-4. Cloned CDNA sequences of mouse 21.6 VL and VH (see AAQ99892) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They
                                     to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAR81332 standard; Protein;
                   The sequence represents the human reshaped antibody 21.6 light chain variable region against leukocyte adhesion molecule VIA-4. Cloned cDNA sequences of mouse 21.6 VL (AAQ99889) and VH (AAQ99892) regions are linked to human constant regions in the construction of a humanized antibody against VIA-4. The 5' and 3' ends of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Region

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L69 in the human kappa LC VR framework are replaced by the amino acid present in the equivalent position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a leukocyte to an endothelial cell and to treat inflammatory diseases such as multiple sclerosis. They can also be used in the treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for detecting VLA-4, for affinity purification or for generating anti-idiotype antibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This polypeptide comprises the light chain variable region (VL) of mouse anti-alpha-4 integrin monoclonal antibody 21.6. The complementarity determining regions (CDRs) of the 21.6 VL can be CC incorporated into a human REI framework to produce a claimed humanised 21.6 VL (see AAW22412) and a claimed humanised 21.6 CC antibody that is used in the manufacture of a medicament for CC treating a disease selected from asthma, atherosclerosis, AIDS, CC dementia, diabetes, inflammatory bowel disease, rheumatoid arthritis, transplant rejection, graft versus host disease, tumour CC metastasis, nephritis, atopic dermattiis, porriasis, myocardial CC may also be used in the affinity purification of alpha-4 integrin CC may also be used in the affinity purification of alpha-4 integrin CC generating idiotypic antibodies. The humanised antibodies of the CC invention have a half-life in the human circulation essentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein 3 (MCP-3) and human Muc-1; (2) human interferon induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human SDF-1 and human Muc-1; (5) human IP-10 and HIV gpl20; (6) human MCP-3 and HIV gpl20; (7) human MDC and HIV gpl20; and (8) human SDF-1 and HIV gpl20. The fusion proteins, and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating cancer or treating or preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays funding interesting inventions. The present sequence represents a fusion protein from the norseent invention.

The fusion proteins, and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating cancer or treating or preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. The present sequence represents a fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen proteins colored fusion proteins comprise: (1) human monocyte chemotactic protein 3 (MCP-3) and human Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human SDF-1 and human Muc-1; (5) human IP-10 and HIV gp120; (6) human MCP-3 and HIV gp120; (7) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (7) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human MDC and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SDF-1 and HIV gp120; (8) human SD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; Page 115-116; 142pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes fusion proteins comprising a chemokine and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise: (1) human monocyte chemotactic protein-3 (MCP-3) and tuman Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-1; (3) human macrophage-derived chemokine (MDC) and human Muc-1; (4) human SDF-1 and HIV gpl20; (6) human IP-10 and HIV gpl20; (6) human SDF-1 and HIV gpl20; (7) human MDC and HIV gpl20; and HIV gpl20; (8) human SDF-1 and HIV gpl20. The fusion proteins, and nucleotide sequences encoding them, and be used for producing an immune response, e.g. an effector T cell continuous response. They can also be used for treating cancer or treating cor preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. AAY2916 and AAZ21166 to AAZ21168 are sequences given in the SEQ ID LISTING in the present invention but which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is an example of a CDR-grafted light chain of the invention. The constant regions are based on sequences of the human kappa constant domain, the signal sequence is derived from murine MAD B72.3 and the CDR sequences are based on the murine OKT4A light chain CDRs. The recombinant antibody encoded by this sequence has affinity for CD4 similar to that of OKT4A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        guanidine isothiocyanate. First strand cDNA synthesis was catalysed by MuLv reverse transcriptase. The primers used for cDNA synthesis were complementary to the 5' end of the CH1 domain of the heavy chain expressed by the hybridoma of interest, or to the 5' and of the C kappa domain. Some of the primers used for cDNA synthesis are shown in AAQ97511-Q97518. The primer used for cDNA synthesis of the cariable region of a particular antibody polypeptide was also used for PCR amplification of that variable region, in conjunction with an appropriate V-region primer. In addition, the VH primer AAQ97518 was used to amplify the mab 2D5 and 5B6 heavy chains. The sequences of the PCR amplified nucleotides were determined. These are given in AAQ97918-Q97510 and the deduced AA sequences in AAR79241-R79250 & AAR78970-R78971. The descriptions of the SEQ ID nos given on pp 44-45 and in the claims are different from the descriptions in the sequence listings are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of the variable region of the kappa light chain from murine monoclonal antibody K20. The antibody recognises the beta 1 subunit (CD29) of integrins and inhibits activation and proliferation of peripheral T cells induced by anti-CD3 antibodies. Monoclonal antibody K20 is a preferred target for humanisation; the humanisation process, the complementarity immunosuppressant. In the humanisation process, the complementarity determining regions (CDRs) of a human antibody with framework regions 70-95% homologous to those of K20 were replaced by the K20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Region
